1 About this Project

This project is a alteration of the Tower Lights Project done in previous semesters for Cs 383 at the University of Idaho. The end goal of this project is to create an editor for the Goofy Glasses. goofy glasses are a creation of the University of Idaho computer science department, goofy glasses are normal sun glasses, with RGB LED lighting, and a transmitter to send and receive data to turn the LED's on each pair of glasses on or off, as well as change the color the glasses are currently displaying. The editor we (team 2) are creating will be able to set specific coloring patterns for all of the goofy glasses at once. The general idea behind this is to create a grid with individual squares, where each square represents a single pair of goofy glasses. The user will then be able to create frames, and make a slide show of frames, and transmit the data from the slide show to the goofy glasses to create a scene.

1.1 Design process

The general outline of the development process can be simplified into three basic steps. Our first order of business was to start developing back-end functionality for the use cases specified (see appendix). Secondly, we created a basic GUI template to visualize layout, and speculate where extra functionality may be needed. Lastly, our focus was placed on integrating the back-end functionality we created with the GUI to bring everything together.

2 Sprint 1 & 2

2.0.1 Problems encountered

Some of the issues we have encountered as a team are presented below. Originally we created a set of global variables, that almost every function would need access to such as, row#, col#, and RGB data. This worked great for testing purposes, but has created scoping issues for future

updates. We are currently working on changing all of the global variables previously mentioned into local variables. We are currently working on altering our existing functions to deal with this scope change from global to local. We also originally created a RGB type, and are now altering this to an already existing Qt RGB type called QColor. Lastly, we are currently considering data flow, and how data will be used be in our goofy lights editor, we have discussed creating some data flow diagrams to help visualize this process.

2.1 Figures

2.1.1 Gui Screenshots

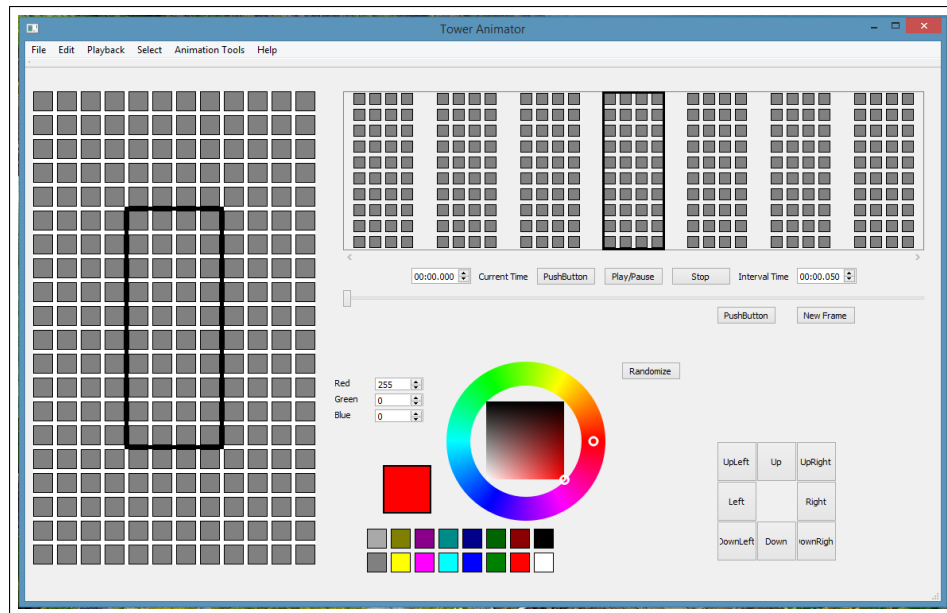

Figure 1: Original GUI design from previous tower lights project

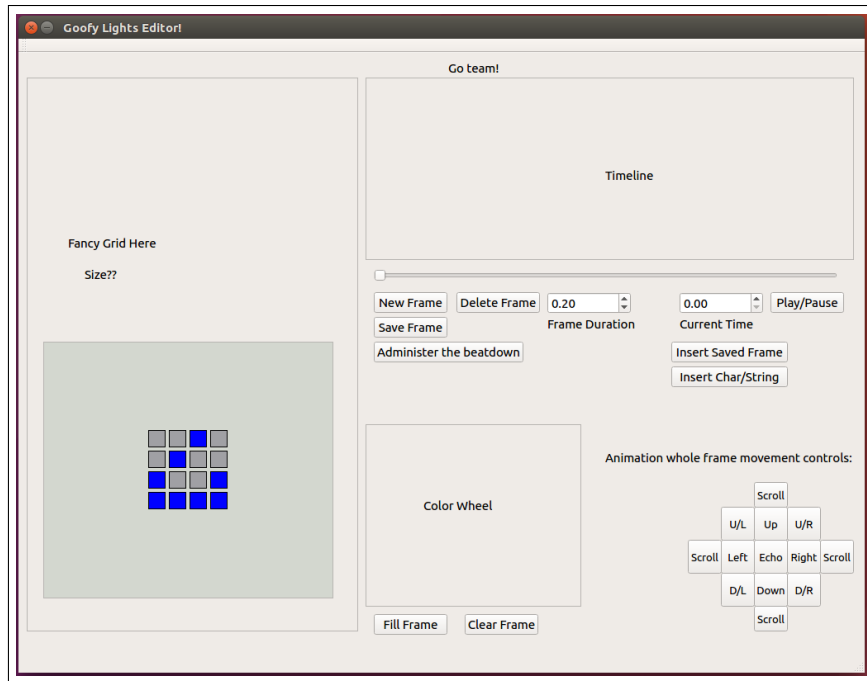

Figure 2: Our initial GUI after first sprint

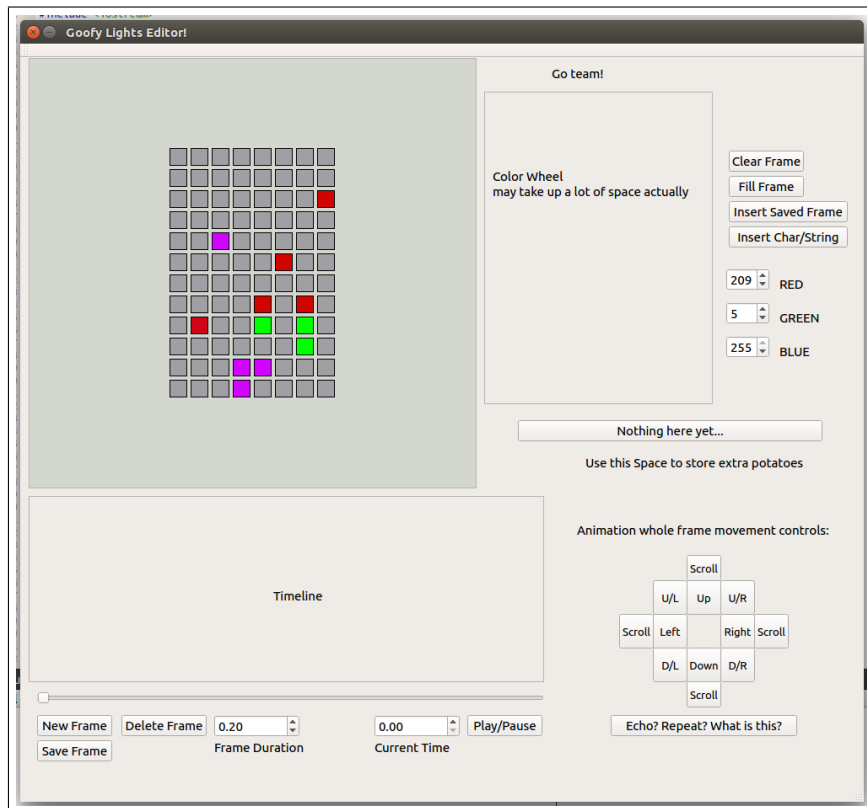

Figure 3: GUI after second sprint, RGB functionality added

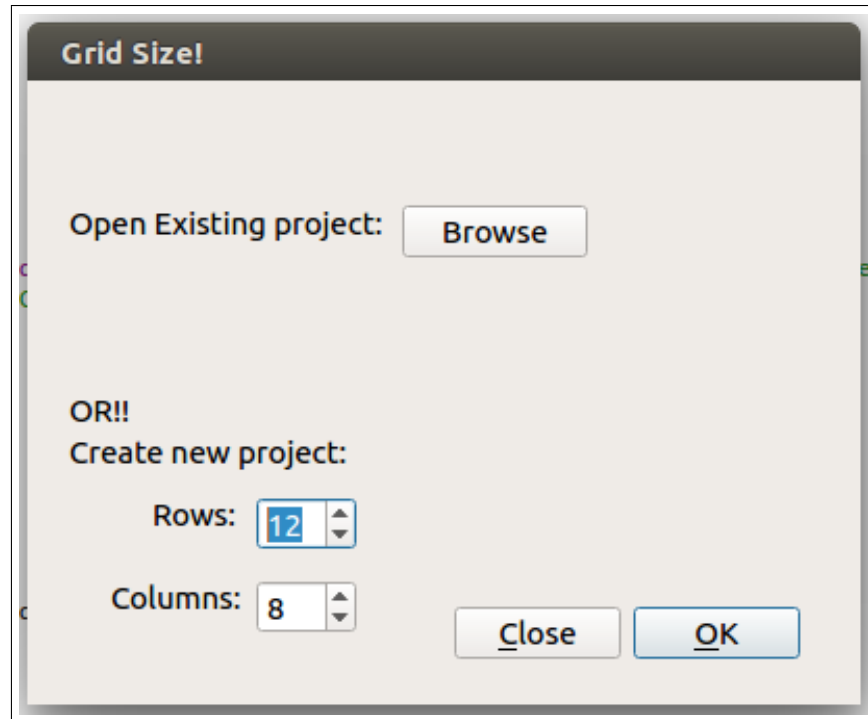

Figure 4: Grid size selection dialog added

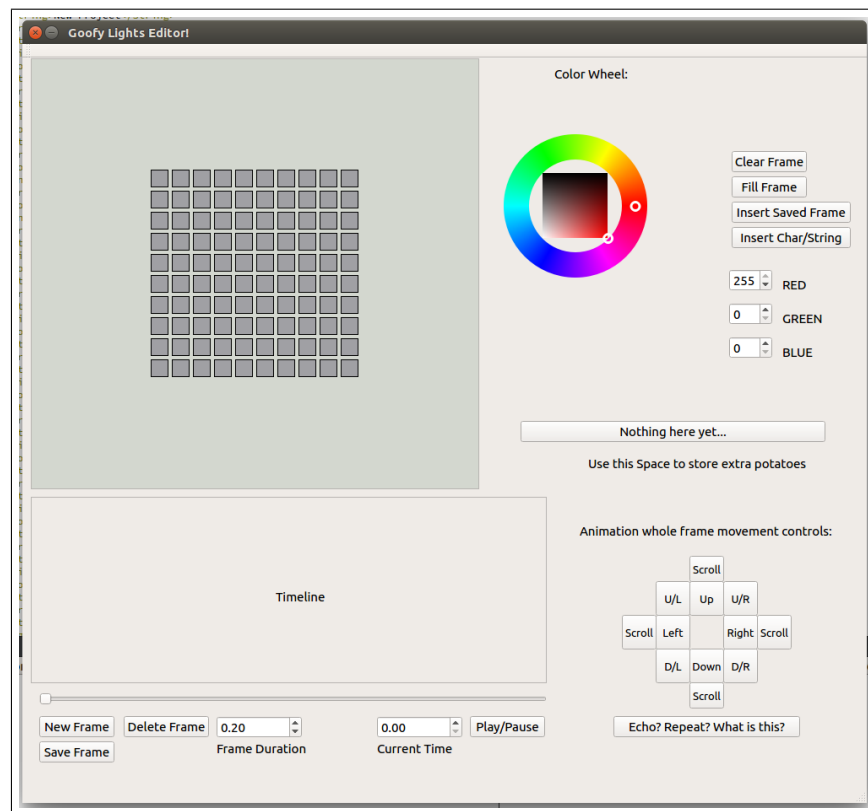

Figure 5: Color wheel added in sprint 3

Figure 6: Color wheel demo

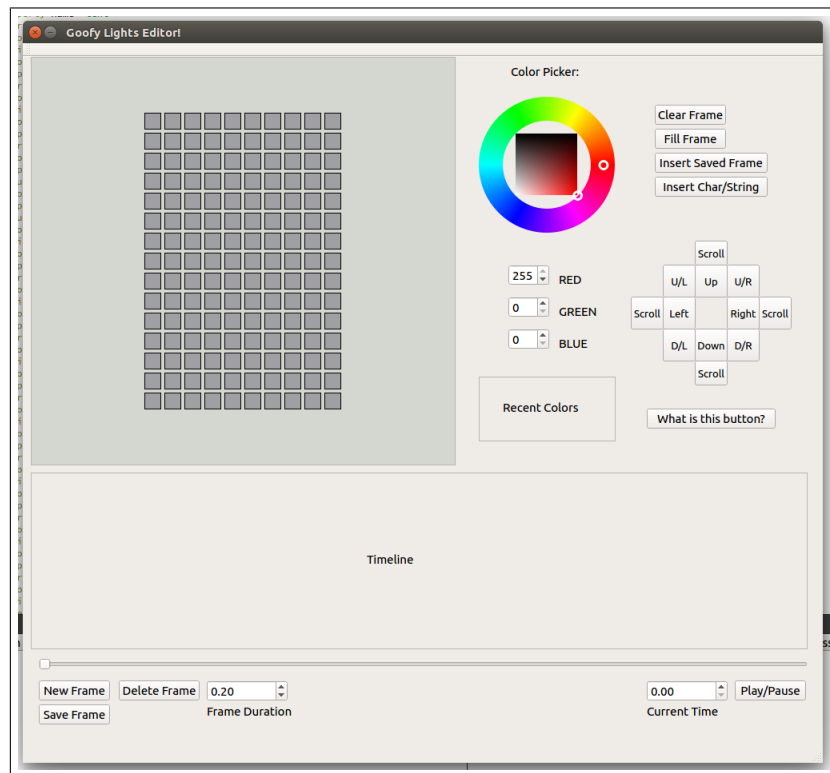

Figure 7: Control buttons moved in sprint 3

Figure 8: Timeline implemented. Default squares now black

Figure 9: Grid size demo 15x20

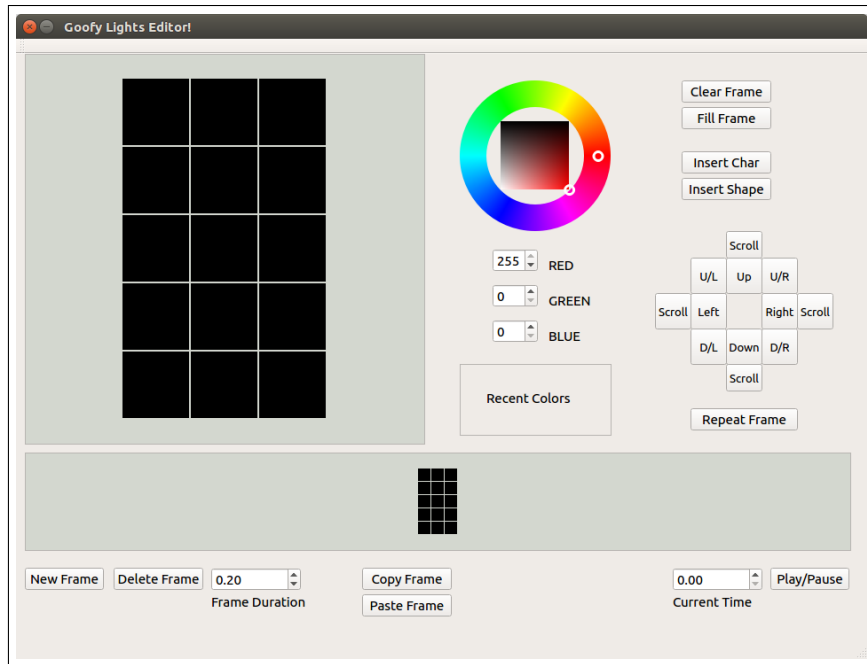

Figure 10: Grid size demo 5x3

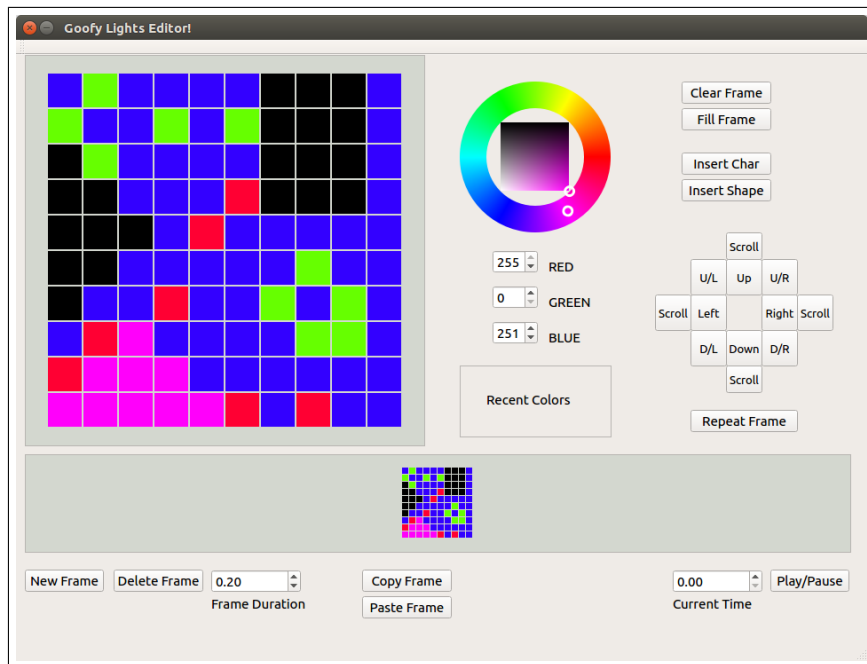

Figure 11: GUI usage demo at the end of sprint 3

2.1.2 UML Diagrams

Figure 12: File manipulation

Figure 13: Fill or clear frame with current color

Figure 14: Save/copy current frame for re-use in animation

Figure 15: Add char/string from predefined set

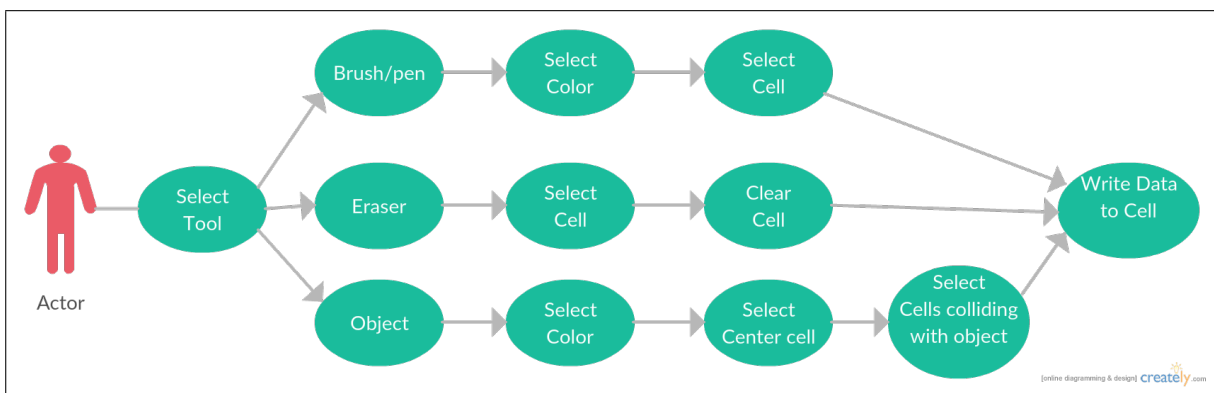

Figure 16: Add a pixel in any position in any color

Figure 17: Move everything in frame 1 pixel in a direction

Figure 18: Choose grid size for the file

Figure 19: Preview play/pause/stop animation

Figure 20: Create new frame

Figure 21: Delete a frame

Figure 22: Open help/documentation text

Figure 23: Chose a color on the colorwheel

Figure 24: Insert a saved frame

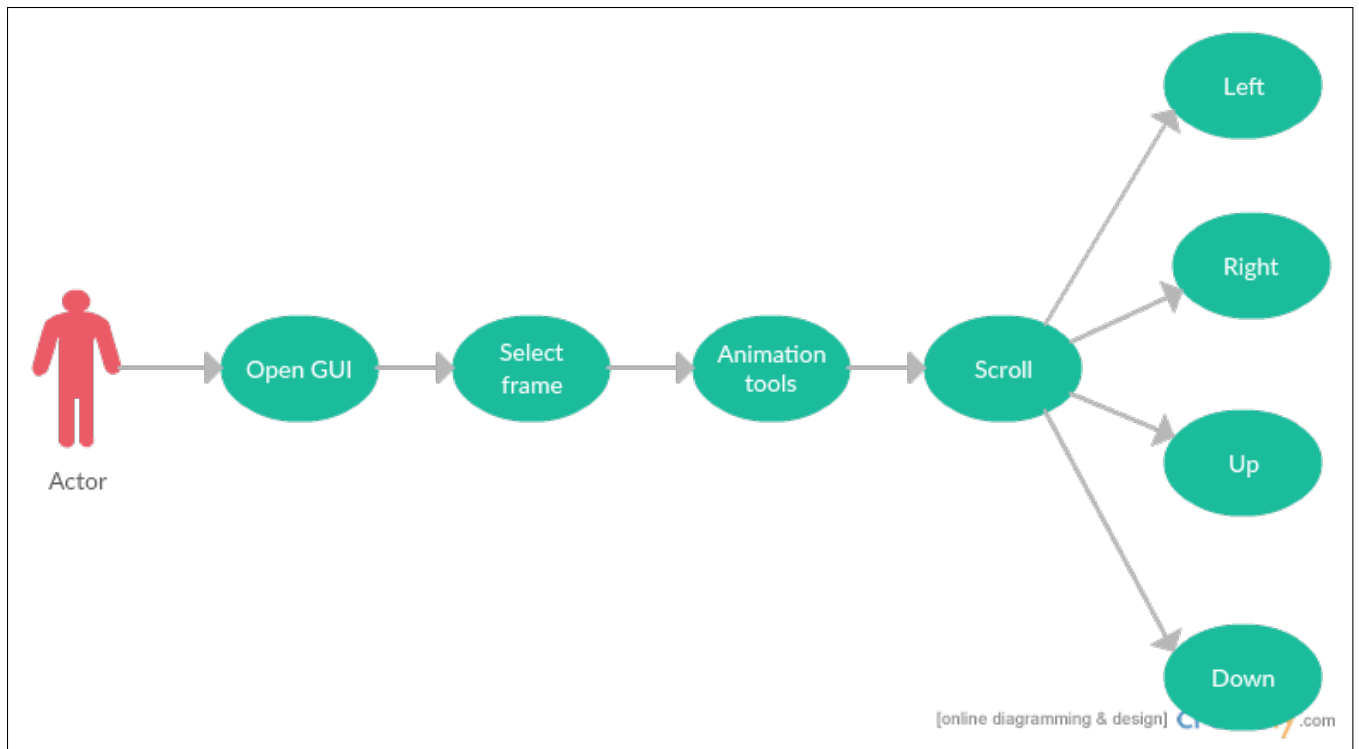

Figure 25: Scroll everything across entire frame

2.2 Timeline sprint 2

Rough timeline, revision #2
Starting March 30th (Thursday)

Week 1: (completed)

- 1) Rough out GUI
- 2) Create data structure
- 3) Start file manipulation functions
- 4) Make something to look at (pretty colors)

Week 2:

Sprint 2:

- 1) Add Row/Column data to Framedata
 - 2) Delete attached RGB structures
 - 3) Copy Framedata
 - 4) Retrieve frame x
 - 5) Fix RGB bug
 - 6) Update frame x
- //finish by TUESDAY???

Week 3:

Sprint 3:

SOLIDIFY GUI LAYOUT (buttons, sliders, sizes)
Start filling out the functionality of buttons

Week 4:

Sprint 4:

Finish all functionality
Add extra features
Start final documentation

Week 5:

Final sprint??

System testing, find bugs, hopefully something works mostly
Update UML diagrams
Polish final documentation

2.3 GitLog during sprint 2

Git log since 20170330

    main.cpp test code
* 0827459 - Nick Krenowicz, Fri Mar 31 00:48:45 2017 -0700 : Added delete_RGB to
    FrameList delete methods
* 19d0eba - Nick Krenowicz, Fri Mar 31 00:27:19 2017 -0700 : Merge branch 'master' into
    Delete_RGB

```

3 Sprint 3

3.1 Work done and problems encountered

For this sprint in our Goofy Lights Editor we covered a lot of needed basic functionality additions, as well as resolved some issues we created with sprint 2, the summary of these changes can be found below. The main additions our group added to the Goofy Lights Editor in sprint 3, were mostly related to the changes in scope of our variables from local to global, and adding our time line to the GUI. Paul did most of the work for the addition of the time line, and its functionality. After we had a working time line, we added extra functionality to some of the pre-existing buttons we already had displayed in our GUI. This allowed us to test our new time line multiple times for correctness. We did run into a small issue with figuring out how to go about adding and updating the time line frames to match the grid that is currently being edited. A few of our team members set up a "code review" for some needed clarification on some of the GUI functions, as well as discussed how to fix the small issue with the time line mentioned above. The only other major issue we ran into this sprint, that was carried over from sprint 2, was scoping changes. We changed a lot of our local variables that were being used in multiple functions to a global scope for ease of access.

3.2 Timeline sprint 3

Our time line for sprint 3 has almost stayed the same since the last sprint. Original sprint 3 time line: Solidify GUI Layout (buttons, sliders, sizes, ect.)

Updated Sprint 3 time line:

- Recent Color Palette
- Alter adding to the time line (linked list)
- Integration of existing code into GUI
